## Research Profile

My research focuses on the thermodynamics and phase transitions of water in porous media. I am interested in understanding how these pore-scale processes shape Earth and engineering systems at the large scale. My work has been published in journals including ***Physical Review Letters***, ***Water Resources Research***, and ***Géotechnique***. I also serve as an ***Associate Editor*** of ***Vadose Zone Journal***.

Current research interests include:

- **Freezing and Melting in Porous Media:** Soil freezing curves; pore-scale ice nucleation and crystallization; ice-lens formation and growth in seasonally frozen ground and permafrost.
- **Interfacial Thermodynamics and Transport:** Soil-water interactions; vapor sorption and capillary condensation; thin-film and confined water transport; stable-isotope fractionation of pore water.
- **Soil Physics and Poromechanics:** Soil water potential; soil water retention and hydraulic conductivity; effective stress; hydro-mechanical behavior of unsaturated soils.

## Education

**Ph.D., Civil Engineering** Sept. 2020 – Jul. 2026
Hunan University, Changsha, China
Supervisor: Prof. Chao Zhang
Thesis: Unsaturated Mechanical Behavior of Salt-Affected Soils

**B.S., Civil Engineering** Sept. 2016 – Jun. 2020
Hunan University, Changsha, China
Supervisor: Prof. Chao Zhang

## Presentations

**Gordon Research Conference: Flow and Transport in Permeable Media**
Les Diablerets, Switzerland — Jul. 2026
Poster: Fractionation due to soil–water interactions affects global isotopic evapotranspiration partitioning

**AGU25**, New Orleans, LA, United States — Dec. 2025
Poster: Fractionation Due to Soil–Water Interactions Is an Important Omission in Global Isotopic Evapotranspiration Partitioning

**Ice at the Micro-scale 2025**, Ascona, Switzerland — July 2025
Poster: Salts retard ice crystal growth in supercooled droplets during recalescence

**AGU24**, Washington, D.C., United States — Dec. 2024
Poster: Phase equilibrium and transitions in salt-affected soils

**InterPore2024**, Qingdao, China May 2024
Oral: Adsorption-induced Effective Stress in Porous Media

**The 4th International Soil Modeling Consortium Conference**, Tianjin, China May 2024
Poster: Coupling Between Soil Matric Potential and Osmotic Potential

**InterPore2023**, Edinburgh, Scotland May 2023
Poster: A Poroelasticity Theory for Soil Incorporating Adsorption and Capillarity

**The 9th Young Experts Forum on Geotechnical Engineering**, Changsha, China Jun. 2021
Oral: Unified Elastic Modulus Function for Variably Saturated Soils

## Academic Service

### Editorial Service

Associate Editor, *Vadose Zone Journal* 2026 – present

Social Media Editor, *Vadose Zone Journal* 2025 – 2026

### Journal Reviewer

Communications Earth & Environment; Water Resources Research; Vadose Zone Journal; Geoscientific Model Development; Bulletin of Engineering Geology and the Environment; Construction and Building Materials; Geotechnical Research.

## Awards & Honors

**First Prize of AGU Student Award** 2024
Unsaturated Zone Technical Committee, American Geophysical Union

**National Scholarship for Graduate Students** 2024
Ministry of Education, China

**Engineering Innovation Design Scholarship** 2022
Hunan University

**Outstanding Innovative Undergraduate Thesis** 2020
Hunan University

## Technical Skills

**Computational Methods and Programming:** MATLAB, Python, QGIS, and molecular dynamics simulation.

**Experimental Techniques:** Water vapor sorption, infrared spectroscopy, soil strength and deformation testing; experience with synchrotron X-ray scattering (WAXS/SAXS) and neutron scattering experiments.
